

BSA Standard Grade - 30% solution

Ref: 1000-30

DESCRIPTION

CAS number: 9048-46-8

Bovine Serum Albumin (BSA) is a non-glycosylated protein of 66 kDa. Produced by the liver, it is the most abundant protein in plasma.

H2B Bovine Serum Albumin is obtained by a proprietary Heat-Shock method, designed to prevent the excessive use of denaturing organic solvents. It undergoes a thermal inactivation during 3 hours at 65 °C in order to inactivate potential viruses. 30% BSA solution has been 0.2 µm filtered and is a ready-to-use solution in deionised water.

Bovine plasma used for the manufacture of this product is collected from French healthy cattle declared free from BSE disease in its clinical forms. It is sourced in EU-approved French slaughterhouses.

Thanks to over 20 years of experience and the highly controlled manufacturing process, H2B guarantees strong expertise and high batch-to-batch repeatability.

APPLICATIONS

Albumin has a key role for maintaining oncotic pressure, and is the main carrier for low molecular weight compounds such as fatty acids and hormones. Due to its versatile

properties, BSA plays a major role in numerous biological applications such as blood grouping, cell culture or immunoassays (ELISA, RIA...).

H2B Bovine Serum Albumin can be used in most diagnostic and research applications, as protein standard, stabilizer and buffering or blocking agent.

PHYSICAL CHARACTERISTICS

30% BSA solution is amber and particulate-free.

ANALYSIS

Analysis	Method	Specification
Dry extract	Loss on drying	> 300 g/L
Total proteins	Kjeldahl	> 290 g/L
pH	Potentiometry	6.5 - 7.4
Albumin purity	Electrophoresis	> 97 %
Mesophilic germs	Culture	Absence / 1 mL

PACKAGING

Package sizes of 1 L and 5 L, other sizes available on request.

Free sample available for evaluation.

STORAGE & SHELF LIFE

Shelf life of 3 years stored in original sealed packaging, away from light, between +2°C and +8°C.

RECOMMENDATIONS FOR USE

30% BSA solution is ready-to-use and saves time and cost of solubilisation and filtration.

Use under aseptic conditions is highly recommended. If not, it is advisable to use the product in its entirety or to add preservatives. H2B also provides BSA Standard Grade - 30% solution with 0.1% Sodium Azide (ref: 1100-30).

Only for research or manufacture of *in vitro* diagnostic reagents. Not for therapeutic use.
